

The Burlington

The Burlington is a Condominium Development
Located in the Pearl District in Downtown Portland

2004

There were many key factors in successfully completing this elaborate landscape: understanding the design and achieving the overall intent of the architect, consistent attendance at on and off site meetings, and efficient teamwork between employees in the office and those in the field. We provided traffic and pedestrian safety, grading, drainage, soil preparation, unit paving, planting, irrigation, site furnishings, and erosion control. We bring the value of experience from performing these duties and are able to know what works and what does not. We have experience in dealing with high traffic and limited space.
